

FUNCTIONS

With an attractive price, the CT 1016 autonomous of access control have 1016 different code, and 2 "PASS" codes.

We can connect it on all 220 Volts automatism, CT 1016 becomes 100% autonomous.

Kind of code is DTMF (Dual Tone Mélange Fréquence), we could compare it to a phone with 16 different keys .

There are 1,1 milliards of different possibilities.

Best advantages of this system of coding, are complexity of signal sent, its precision, and the fast reaction time of decoder.

DETAIL OF FUNCTION

Each code transmitted by receptor is compared to codes in memory. If two codes corresponded, the receptor fix contact of relay during the impulsion.

Codes "PASS" allows to control with the same emitter, some systems in different places. If failure or memory change, "PASS" code keep active.

You can control code by computer which generate code on remote control and removable memory of receptor.

PROGRAMING ON PLACE

To delete, add, or another remote control on place, first control update memory of system. Installer not move. Customer catch information on remote control to delete losing code.

CARACTERISTIC

Réf "ECE 1016" Power supply 12 to 24 Volts
Réf "ECE 2016" Power supply 220 Volts.
